

I need a custom software solution now.
Who can help?

Can my IT department handle our
project load?

Am I getting the most from my current
database applications?

My project is in trouble.
How can I get on track?

What application best fits?
Web? Client/Server? Both?

Where can I find skilled
IT Resources?

If you find yourself asking these or similar questions, **C/S Solutions** can help!

We can design a Custom Enterprise or eBusiness Solution that is tailored to fit your needs.

Custom Web/Database development

Business Enterprise software is the backbone of any successful business strategy and eBusiness has redefined the rules of the marketplace. A C/S Solutions Web application, integrated with your corporate database, can provide a world-class software solution. Systems built on a comprehensive Internet or Intranet infrastructure will allow you to take advantage of emerging technologies.

Whether you just want a Web presence for your existing systems, need to scale-up departmental systems for enterprise deployment, or want to create a new system from scratch... call us. We've been there, done that.

 **C/S Solutions, Inc.**

eBusiness &
Enterprise Solutions

The FORM and the FUNCTION of custom software development

The strategy of designing a custom software solution is to *form* a sequence of events in the development cycle from vision and scope through **Design**, **Development**, and **Deployment**... followed by unparalleled customer support. Implementing a custom software solution allows the *function* of the application to provide the essential information you need to excel in the marketplace.

Successfully Implementing Project Management Business Solutions

C/S Solutions' Project Management methodology is the catalyst that enables us to create and install your application efficiently. Our Project Management Team will consult with you to define the scope, timeframe, investment level, and commitment of the resources necessary for successful project execution.

We will work with you and system users to specify the key solution functionality and document the application in a Solution Design Specification. To validate that desired features and functionality are present, our developers will then create a prototype that will be refined into a fully functional pilot application.

Finally, we verify system integration points and workflow processes, incorporating the agreed-upon pilot adjustments, then deploy the application and complete the final transfer of knowledge from C/S Solutions to your end users.

Supporting your Staff Augmentation resource needs

We offer Staff Augmentation services that can be customized to fit your specific needs. We will review your development plans to help us assign the right individuals with the right skill sets and the experience you need to succeed. Our developers and project managers are permanent, long-term employees that have undergone an intensive, proprietary technical screening to assure that only those who can "walk the walk" are hired. Additionally, C/S Solutions offers contract-to-hire and permanent placement services to help you build or strengthen your staff. We can deliver exceptional candidates using the same recruiting and screening process used for our own staff, but tailored to your specific requirements. No matter what the circumstances, we want you to consider C/S Solutions your source for the best resource.
