

# RESITE GUARD

**RESITE Guard – Watch SAP™  
and keep your EPSS current!**

## **SAP Changes reported to your EPSS team automatically**

RESITE Guard notifies your team of SAP changes automatically via e-mail. As SAP Transports (changes) are moved across the SAP landscape, you can be notified of progress, impact and schedule of any SAP change. This enables you to keep your training, on-line help and other content up to date. From new reports... to new business... to new releases, Guard watches the changes from sandbox concept through production, and automatically notifies your support team of the changes. The notification is configurable, even down to the SAP object level!

**RESITE Guard can be used with any EPSS system,  
including RESITE Enterprise, Info Pak™ or OnDemand™**

- Different team members can be notified based on changes to specific areas of SAP
- Every SAP instance can be monitored
- For most SAP changes, Guard will provide a list of SAP T-codes that are impacted via the change
- Guard contains a database to provide history and metrics for all your processes which can be accessed via the web
- Guard contains a report writer so that you can extract the information needed
- The calendar easily handles the most rigorous scheduling requirements and is fully integrated with the entire process
- The independent workflow engine manages communication with multiple systems and organizations so any and all processes can be mapped through it

**Insite Objects, Inc. is a leading provider of robust change management, documentation, online help and training software solutions.**

- We have been creating software solutions since 1995.
- We are customer driven and responsive to the marketplace. A key success factor for us is asking clients what they need and aligning our software solutions to meet those needs.
- We use the most advanced technology to create integrated leading-edge solutions for change management, documentation, online help, and training challenges.
- Currently, our products have been purchased by more than 300 companies worldwide.
- Since being founded, the company has achieved continued growth year after year.
